TRADITION & INNOVATION

IKEDA CORPORATION

TRADITION & INNOVATION

Ikeda Corporation was established in 1927 by the pioneer Yoshi Ikeda, who laid the foundation for a strong international business.

For nearly a century, Ikeda has been providing innovative raw materials for the cosmetic, personal care, food, and health care industry.

The range of products includes, among others, silk and its derivatives, natural oils, butters and waxes, plant extracts from oriental botanical species, rheological agents, mica and sericite, functional inorganic powders for make-up, functional lightening and anti-aging ingredients, and raw materials for hair-care.

In order to create new values based on a solid understanding of today's needs, Ikeda is committed to transcending conventional market limitations to establish itself as a global innovator, creating increasingly cutting-edge products.

REV0 08.2021

The logo for iKeda, featuring the lowercase letters 'iKeda' in a bold, sans-serif font. The 'i' is lowercase and the 'K' is uppercase.

PHARMA COSM POLLI

AMILON

Spherical silica coated with amino acids. Amilon provides the finished product a smoother texture than that given by nylon powder.

APALON

Powder composed of spherical porous particles of Calcium Carbonate coated with Hydroxyapatite. Selectively absorbs fatty acids but not triglycerides.

COTTON SEED OIL

Oil derived from cottonseed. It has high stability. It can be used as a binding oil.

DEØLIGHT SERIES

A series of actives with proven efficacy against unpleasant odors.

iMATEL COLLAGEN WATER

Bio-fermented collagen solution. Efficacy tests demonstrate an average moisturizing efficacy superior to control treatments (glycerin, hyaluronic acid).

iMATEL RICEBLANC

Solution of the mixture of α -glucosylglycerol (α GG) and glycerol. This product has high purity and was obtained during the research to improve the flavour of sake by combining corn starch, glycerin, and enzymes. Tests prove the anti-ageing action, whitening.

LICOZIN G-2

This functional principle derived from liquorice has anti-inflammatory properties and is widely used in cosmetics and pharmaceuticals.

LIMUVEIL SERIES

Product obtained from the special Mozuku seaweed. Rich in fucoidans, the presence of these polysaccharides produced by the algae is responsible for the anti-ageing properties and the anti-fall action.

NATURAL CURL

Based on vegetable tannins, it acts on the hair creating a 3D reticulated structure for an excellent definition of the ringlet. It represents the alternative of natural origin to traditional oxidizing agents used in permanent chemical treatments.

SERICITE SERIES

A natural mineral obtained from igneous and metamorphic rocks, Sericite DNN-2SH and iCode Powder Sericite NT provide excellent adhesion, extreme durability and exceptional colour rendering.

SIBERIAN GRACE

Siberian larch bark extract. It contains the natural super-antioxidant Taxifolin. It is an excellent ascorbic acid protector; it is valued for its lightening properties.

SILK SERIES

From silk proteins, we obtain by hydrolysis silk peptides and amino acids. By combining these two components, we produce hydrolyzed silk, which has a film-forming and humectant effect.

I PARTNER:

Highly reducing ionised water, electrolysed through a patented process. In addition to its moisturising properties and ability to promote the penetration of active ingredients, it enables the formulation of preservative-free products.

- ION WATER GE-100
- ION WATER S-100

Since its foundation in 1948, Yokozeki Oil & Fat, now distributed by Ikeda, has maintained its traditional family structure, specialising in the processing of oils and fats.

Established in 1945, Daido Chemical Corporation specialises in the production of synthetic cosmetic ingredients. Its flagship product is the Sangelose line, an innovative series of viscosifying agents that enable the formulation of thixotropic, stable and elastic gels.

I PARTNER:

The company's flagship product is Alcasealan, a polysaccharide produced by *Alcaligenes Latus*, which acts as a gelling and moisturising agent. It is effective in stabilising emulsions, in retaining moisture like hyaluronic acid and for its excellent sensory qualities on the skin.

Jewel Silver A

It is a solution containing silver oxide whose ions can inhibit bacterial growth and prevent unpleasant odours. It has proven antioxidant properties by acting on SOD (Super Oxide Dismutase), the enzyme capable of counteracting the action of singlet oxygen.

The range of products is composed of numerous other references able to respond to different formulation needs.
